

SLIP2000™

GUN LUBE

**AUTOMATIC RAPID-FIRE & REPETITIVE SHOOTING FIREARMS
MACHINE GUNS • RIFLES • PISTOLS**

CURRENTLY MEETS MIL-PRF 63460E

DESCRIPTION

SLIP 2000 Gun Lube is a pure synthetic liquid lubricant. Formulated without the use of mineral oil, petroleum distillates, Teflon or silicone. SLIP 2000 Gun Lube has extremely high penetrating and (EP) anti-wear properties and withstands extreme temperature changes (-110°F to +1250°F). It also combines three essential functions (lubricant, cleaner, preservative) into a single product.

SLIP 2000 Gun Lube will not separate, in fact you do not need to shake it. It will not dry out or evaporate off and it will not become sticky or leave behind a tacky residue. Unlike petroleum products, SLIP 2000 Gun Lube will not attract and hold firing residue, dust, sand or dirt particles.

It's unique formulation penetrates into the smallest, tightest areas that other oils can not go. It actually penetrates the pores of the steel and bonds with the metal providing a long lasting protective coating that keeps all guns operating much smoother for much longer. This coating helps keep lead, carbon, copper and plastic from sticking and building up, reducing your cleanup time.

ENVIRONMENTALLY SAFE - USER FRIENDLY

SLIP 2000 Gun Lube is a GREEN product and was developed with your health, safety and the environment in mind. It is Biodegradable, Non-Toxic and Non-Hazardous product built from a renewable source. Also, being GREEN makes it a non-regulated product.

LUBRICATES

SLIP 2000 Gun Lube has incorporated advanced technology additives to enhance film strength and wear properties. Penetrating the pores and bonding itself to the surface of the metal through physical absorption. Even when the surface is wiped dry to the touch SLIP 2000 Gun Lube is still present and lubricating the metal parts from within the pores of the weapon. This product does not require a liquid carrier to be present for protection. SLIP 2000 Gun Lube will OUTLAST any other products on the market today! We have done this without adding any oils, petroleum distillates, silicones or PTFE.

**BIODEGRADABLE • USER FRIENDLY
NON-TOXIC • NON-HAZARDOUS**

CLEANS

SLIP 2000 Gun Lube will aid in the effective removal of built up dirt, lead, copper, carbon, corrosion particles and firing residues that can build up and become abrasive to both recoil and gas operated mechanisms. Slip 2000 Gun Lube gets into those hard-to-reach areas and penetrates deep down into copper, lead and plastic wad fouling, trapped dirt, grit and grime and helps float it away while dissolving built up carbon.

PRESERVES

A thin-micro film of our enhanced preservative immediately bonds itself and forms a barrier that displaces moisture and provides excellent corrosion and rust protection. SLIP 2000 Gun Lube has passed the Salt Spray Corrosion (ASTM B-117) 150 Hour Test.

SIMPLE TO USE

For best long-term results, apply Slip 2000 Lubricant to clean surface and allow to penetrate. Apply to all moving parts that require lubrication and/or protection from corrosion. Apply to inside of bores, barrels, chambers, firing pins, ejectors and trigger mechanism. Slip 2000 Lubricant will penetrate and free gummed up and sticky parts. Lubricant will penetrate into areas where oils do not go, break up and purge out old dried-up oils, carbon, dirt and debris. Slip 2000 Lubricant should be used as the cleaner on next cleaning. (For excessively dirty or neglected parts, Slip 2000 725 Cleaner/Degreaser or our Carbon Killer should be used on initial cleaning.)

Made in the U.S.A. • Manufactured by SPS Marketing, Inc. • (707) 585-8329 • www.Slip2000.com

GUN LUBE

APPLICATIONS

Slip 2000 Gun Lube is formulated to meet the complete requirements of lubrication, cleaning and preserving for both small arms and large caliber weapons in virtually all climate conditions.

Apply to weapons metal surface liberally on first application. Allow to penetrate surface on first application approximately 5 to 10 minutes. Wipe excess lubricant from surface if a dry to the touch result is desired. This will help prevent dust and dirt from sticking and collecting since you weapon will look and feel dry.

When the weapon is used and heats up Slip 2000 Gun Lube will penetrate even deeper into the pores of the metal. With a second application/cleaning with this product these pores will fill in with additional Lubricant and a new protective barrier will form making your next cleaning much easier and faster.

- **Shotgun** users will see increased distance, pattern consistency and reduced build-up of carbon, lead and plastic wad deposits. Automatics like the 390/391 will cycle smoother and longer with lighter loads and without slowing down. Use it on shotgun barrels inside and out, chambers, ejectors, hinge pins and all other moving parts. Will not harm wood, bluing or nickel finishes. Will help keep carbon, lead and plastic wad from sticking to barrels.
- **Black powder** users will see protection against black powder and pyrodex fouling. Will also work on weapons barrel, breaches, bolts and works great as a wad lube. Just like seasoning a good frying pan...the more you use it, the less anything will stick.

- **Automatic weapons** users such as M-16, AR-15, M-4, MP5, MK-19, M 72 LAW should apply to all gas system parts and all other moving parts. First time users should allow to penetrate for 5 to 10 minutes. Users will find the next cleaning to be much easier and will take half the time.
- **Pistol** users may apply to firing pins, slide rails and barrels as well as all other moving parts that require lubrication. All parts will feel and work smoother.
- **Revolver** users should apply to cylinder faces to help keep carbon, lead and burnt powder from sticking. Next cleaning will be much easier with Slip 2000 Lubricant/Cleaner. Users will actually be able to wipe carbon from cylinder face. (Initial cleanup may be performed with our Slip 2000 Carbon Killer™ to insure a clean surface to begin with.)

PROVEN TO WORK IN ALL CONDITIONS

You can not always control the conditions you have to shoot in but, you can control how well your weapons perform in those conditions! Don't let dust, moisture, cold weather, heat or carbon buildup interfere with your guns ability to perform. Slip 2000 Gun Lube will not attract dust, dirt or sand. It will not gum up in humid or moist environments, it will not freeze in cold weather, it will not evaporate off in hot climates but it will keep your weapons running smoother longer before you need to clean. Ultimately this means more rounds can be fired regardless of your shooting environment. Extreme conditions require an extreme lubricant. That's why we developed Slip 2000.
